

# TASK SAMURAI

**April 2024**

Get in touch: [hello@tasksamurai.ai](mailto:hello@tasksamurai.ai)

[tasksamurai.ai](https://tasksamurai.ai)

-

# Picking up new tasks is hard

- Working on tasks always starts with an investigation where devs **map the task to locations on the code** they need to change
- This can take up a significant amount of time and require asking questions to coworkers

## Among professional software developers...

- **70%** encounter knowledge silos at work
- **65%** need help outside their immediate team at least 1-2 times per week (**44%** at least 3-5 times!)
- **62%** spend at least 30-60 mins per day asking questions

# That's where we come in

Task Samurai integrates with multiple parts of the developer workflow to effortlessly **make it easier to pick up code and work on new tasks**

# Seamless integration with the entire dev stack

Code Providers

Ticket Systems

Dev environments

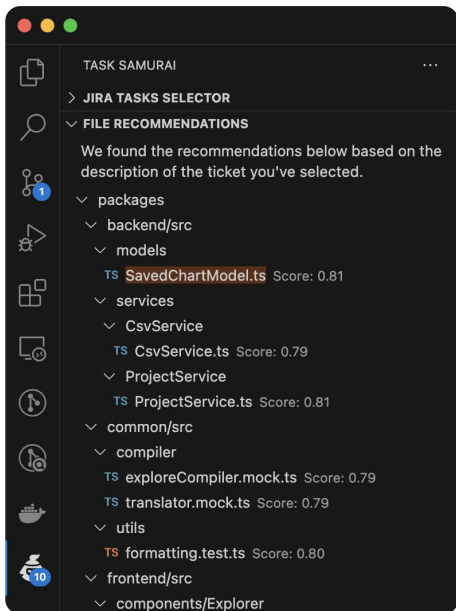

AI code assistants

# Save 30+ mins/day for 60% of devs!

147     .insert({  
148       savedChartId,  
149       tableName,  
150       metricQuery,  
151     })  
152     .returning('*');  
153   return results[0];  
154 };  
155  
156 export {  
157   createSavedChartVersionCustomDimension,  
158   createSavedChartVersionAdditionalMetrics,  
159   createSavedChartVersion,  
160 };
```

Leverage AI tools  
to help write code

# Make picking up tasks easier with AI

- We integrate directly with **existing dev tools** since developers hate adopting new tools
- We **don't compete with existing AI code assistants**, we build on top of them to provide a cohesive dev experience
- AI is changing how code is written, we want to make this a **smooth transition** for devs and integrate with more and more parts of the workflow (e.g. cloud providers, monitoring, deployment tools, ...)

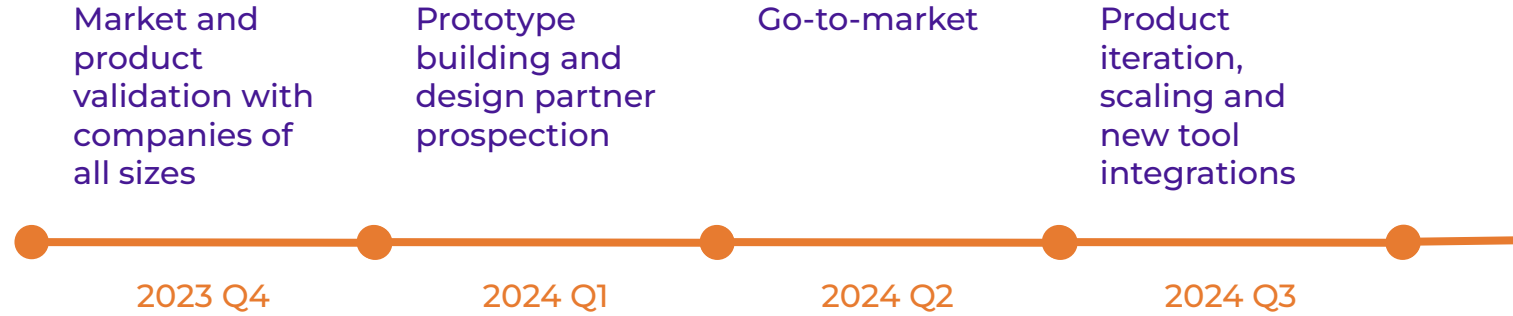

## Focus on B2B and open-source

- Focus on tech companies with 30+ people with a subscription model
  - Aim to expand our existing connections with both startups and large scale companies
- Partner with open source projects which we can help attract more contributors
- Later on, provide free trials with personal projects so devs can experience the advantages of our product

# Where are we at?

# Designed by people who understand the pain

- Our team combines the expertise of huge scale companies (Google) and proven startup successes (Feedzai)
- We bring years of tech leadership, engineering and data science experience
- We know how to bootstrap projects and later scale them
